

Objective:

Recreate the **mobile homepage** design (from top black announcement bar to "New Arrivals" section) of this Figma: (Please do not request edit access to Figma file - if required create a copy of Figma file on your end) <https://www.figma.com/design/Ny3tRPQtGwNzn66haFxUA1/E-commerce-Website-Template--Freebie---Community-?node-id=0-1&p=f>

But **instead of hardcoding content, set up a dynamic system using WordPress**, so a non-developer (business user) can easily update content like images, text, brand logos, collections, and banners through a CMS dashboard.

Technical Requirements:

- Set up WordPress locally (use tools like XAMPP, MAMP, or Local WP).
- Use ACF (Advanced Custom Fields), Gutenberg or a similar plugin to make content dynamic.
- Replicate only the **mobile** layout of the **homepage**:
 - Announcement bar
 - Header + Logo
 - Hero Banner (Image + Text + Button)
 - Brand Logos (Gucci, Prada, etc.)
 - "New Arrivals" section with 2 product cards
- Ensure the following items are editable via the WordPress admin:
 - Announcement bar text
 - Hero banner (image, heading, subheading, button text & link)
 - Brand icons in the bar (upload/remove icons dynamically)
 - New Arrivals collection cards (product details on the card should be as per actual product detail like price, image. Apart from this the business user can change the connected category/collection under new arrivals)
- No hardcoded text or images.
- Use clean class names and code structure.
- Prioritize performance and user-friendly backend structure.

Submission Requirement:

Record a 3–5-minute screen recording covering:

- Full mobile frontend demo (with scrolling & interacting).
- Show WordPress admin panel:

- How to update announcement bar, hero section, icons, and product list.
- Show how non-tech users can manage content.
- Briefly explain how you structured the CMS setup.

How to Submit:

Upload your code to GitHub and share the repo link.

Share the **recording link** (Google Drive, Loom, or YouTube unlisted). (ensure view access is granted!)

Please submit your Assignment in this form - [Toposel | Application Submission Form for Candidates – Fill in form](#) along with your CV.

Evaluation Criteria:

Design Accuracy (Mobile), Dynamic Content Handling, CMS Usability, Code Structure & Cleanliness,
Explanation in Video

Deadline:

Submit within 3 days of receiving this assignment.
